

Red Hat OpenShift Container Platform delivers enterprise-grade application containers

Red Hat® OpenShift allows you to use powerful, speedy containers in your large-scale, enterprise environment

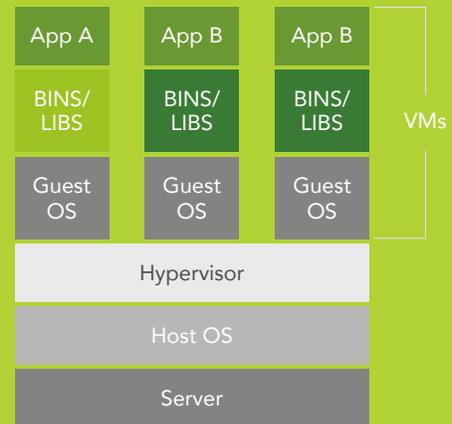

Containers vs. VMs

Containers give your applications direct access to system resources, while VMs require their own operating systems, binary programs, libraries, and application instances to run each app.

Red Hat OpenShift containers

Virtual machine solution

Putting OpenShift containers to the test

UP TO
15,244
requests per second from
a single app

AS LOW AS
4ms
application
response times

In our hands-on tests we simulated a company's stock-trading application. We generated user requests to simulate typical user behavior—things like clicking links, entering information into a form, and of course, buying and selling stock.
