

Reap better SQL Server OLTP performance with next-generation Dell EMC PowerEdge MX servers

The new servers achieved up to 36.1 percent more OLTP database work than current-generation Dell EMC PowerEdge MX servers while also lowering application response time

As your business grows, the demands on your OLTP databases can also grow, requiring more from your data center resources. Investing in next-generation Dell EMC™ PowerEdge™ MX750c servers could provide a high-density environment to handle current and future OLTP demands.

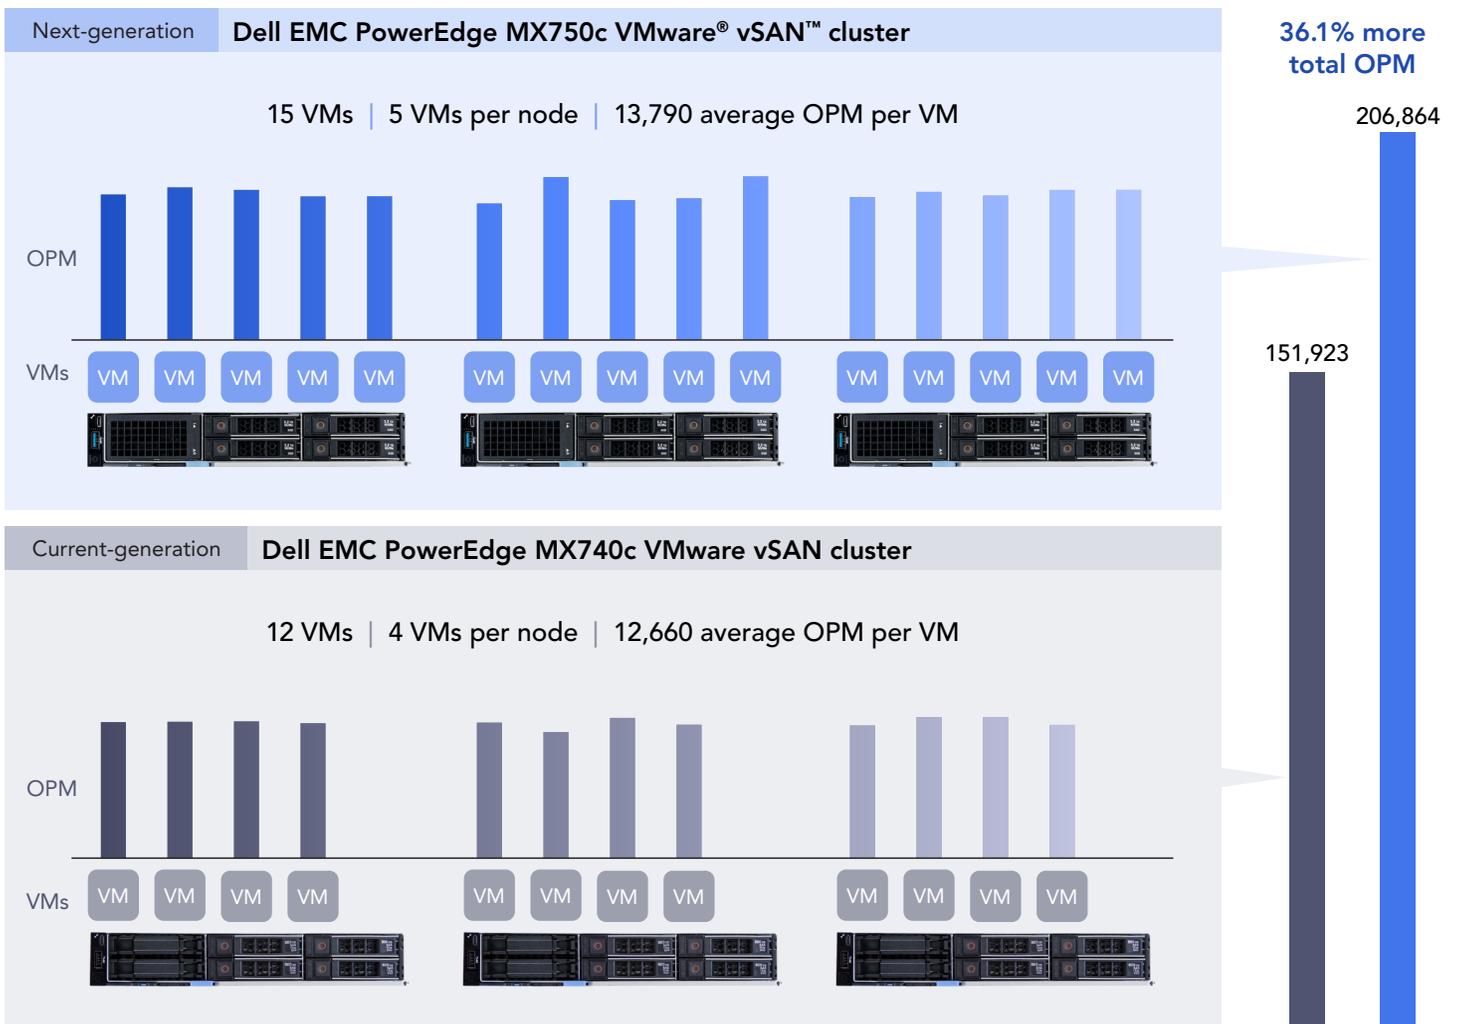

The next-generation cluster supported an extra VM per host for

25% greater VM density

Over 36% more total orders per minute (OPM)
